## Title I Math

The students in Title I Math have been doing a great job with practicing their math facts and working hard in class. We are working on addition and subtraction in 3<sup>rd</sup> grade, multiplication in 4<sup>th</sup> grade, and word problems using multiplication in 5<sup>th</sup> grade. The students have come a long way since September and they continue to grow every day! I have seen a change in their attitude towards math and they are happy to come to class and learn more each week. I love seeing their eyes light up when they realize they are actually getting the concepts they need!

## Math Fun

Please continue to practice math over winter break. Even a small chunk of time to practice math would help the students retain important information they have learned. Here are some great games that can be played with family during the break: Play math war with a deck of cards. You can make it easier for younger siblings by adding the two cards together, or make it more challenging with subtraction or multiplication. Some great games on a device if it is available would be sheppardsoftware.com which has math games in all areas of math. It is great for review and practice.

## Reminders:

Winter break starts December 23 and students return back to school on Monday, January 8, 2018. Please remember to keep up on multiplication facts over break! Even 10 minutes a night will be very helpful! Enjoy your holiday and family time!
